Ideation phase
Brainstorming-Idea Generation- prioritization

Date	**07 March 2026**
Team ID	**SWTID-2026-8307**
Project Name	**Enforcing Mandatory fields using UI policies and migratting Changes with update sets**
Maximum Marks	**4 Marks**

Brainstorming

Brainstorming is a creative process used to generate multiple ideas or solutions for a particular problem. In system development, brainstorming helps the team explore different approaches before selecting the most efficient solution.

In this project, brainstorming was conducted to identify ways to ensure important fields are not left empty during data entry and to safely move configuration changes between different ServiceNow environments.

Idea Prioritization

Idea prioritization is the process of analyzing the generated ideas and selecting the most suitable solution based on feasibility, efficiency, and system compatibility.

For this project, the ideas were evaluated based on the following criteria:

• Ease of implementation
• System performance
• Maintainability
• Compatibility with the ServiceNow platform
• Ability to migrate configurations safely

Brainstorming and Idea Prioritization Diagram

1. Brainstorming Stage

In this stage, different ideas were generated to ensure required fields are properly enforced and system changes are transferred efficiently.

Possible ideas include:

• Using Client Scripts to enforce mandatory fields
• Using UI Policies to make fields mandatory dynamically
• Using form validation rules

2. Idea Evaluation

Each idea was evaluated based on:

• Feasibility
• Ease of configuration

3. Idea Prioritization

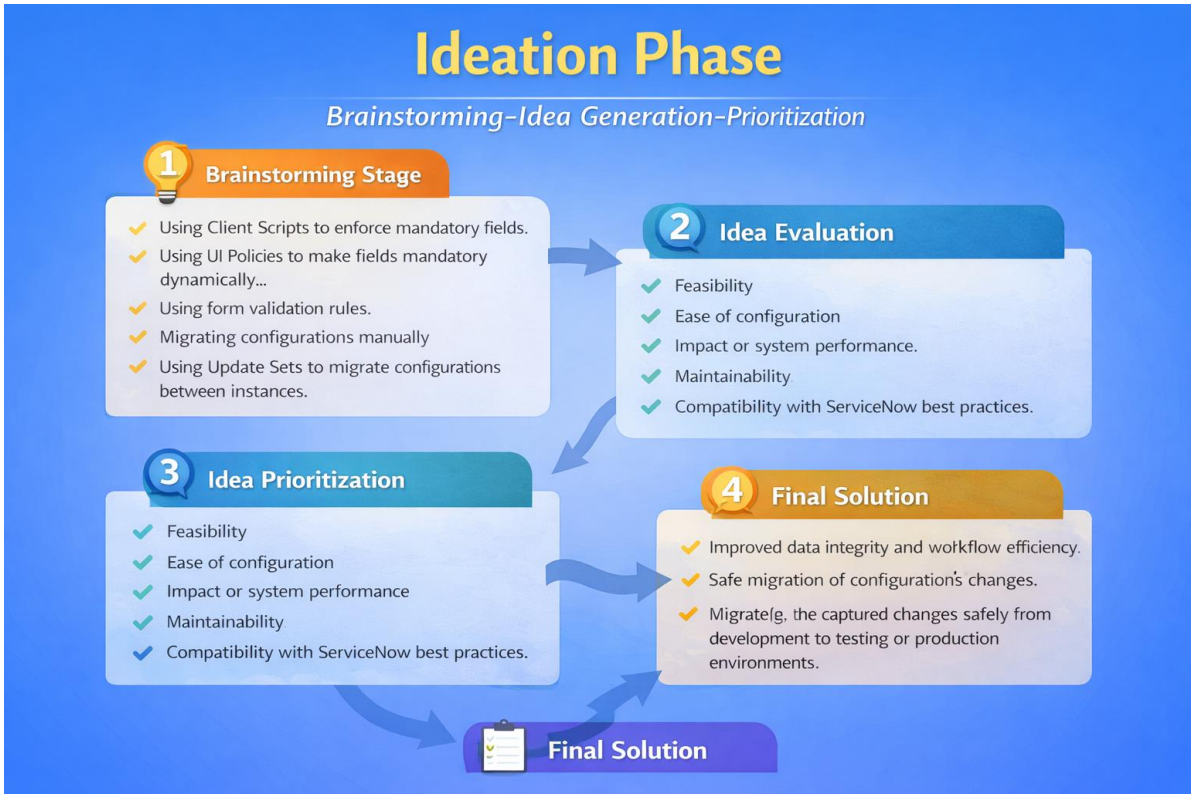
After comparing the available approaches, the team selected the most effective solution.

The prioritized solution is:

• Use **UI Policies** to enforce mandatory fields dynamically in forms
• Use **Update Sets** to capture configuration changes

4. Final Solution

The final solution ensures that important fields are always filled by users and prevents incomplete data entry. Using update sets also helps in safely migrating configuration changes between different ServiceNow instances while maintaining system consiste



Ideation Phase
Brainstorming-Idea Generation-Prioritization
1 Brainstorming Stage
Using Client Scripts to enforce mandatory fields.
Using UI Policies to make fields mandatory dynamically...
Using form validation rules.
Migrating configurations manually
Using Update Sets to migrate configurations between instances.
2 Idea Evaluation
Feasibility
Ease of configuration
Impact or system performance.
Maintainability
Compatibility with ServiceNow best practices.
3 Idea Prioritization
Feasibility
Ease of configuration
Impact or system performance
Maintainability
Compatibility with ServiceNow best practices.
4 Final Solution
Improved data integrity and workflow efficiency.
Safe migration of configuration's changes.
Migrate(g. the captured changes safely from development to testing or production environments.
Final Solution

ncy.
