Requirement
Solution Requirement

Date	**07 March 2026**
Team ID	**SWTID-2026-8307**
Project Name	**Enforcing Mandatory fields using UI policies and migratting Changes with update sets**
Maximum Marks	**4 Marks**

Introduction

The solution aims to improve data accuracy and system configuration management in the ServiceNow platform. In many cases, users may submit forms without filling important fields, which can lead to incomplete records and workflow issues. Additionally, configuration changes made in the development environment must be safely migrated to testing or production .

Functional Requirements

The system should provide the following functionalities:

1. Mandatory Field Enforcement
The system must ensure that important fields in forms are filled before submission. UI Policies will dynamically make fields mandatory based on defined conditions.

2. User Validation
When a user attempts to submit a form without filling required fields, the system should display validation messages and prevent submission until all mandatory fields are completed.

3. UI Policy Configuration
Administrators should be able to create and manage UI Policies to control field behavior such as making fields mandatory, visible, or read-only.

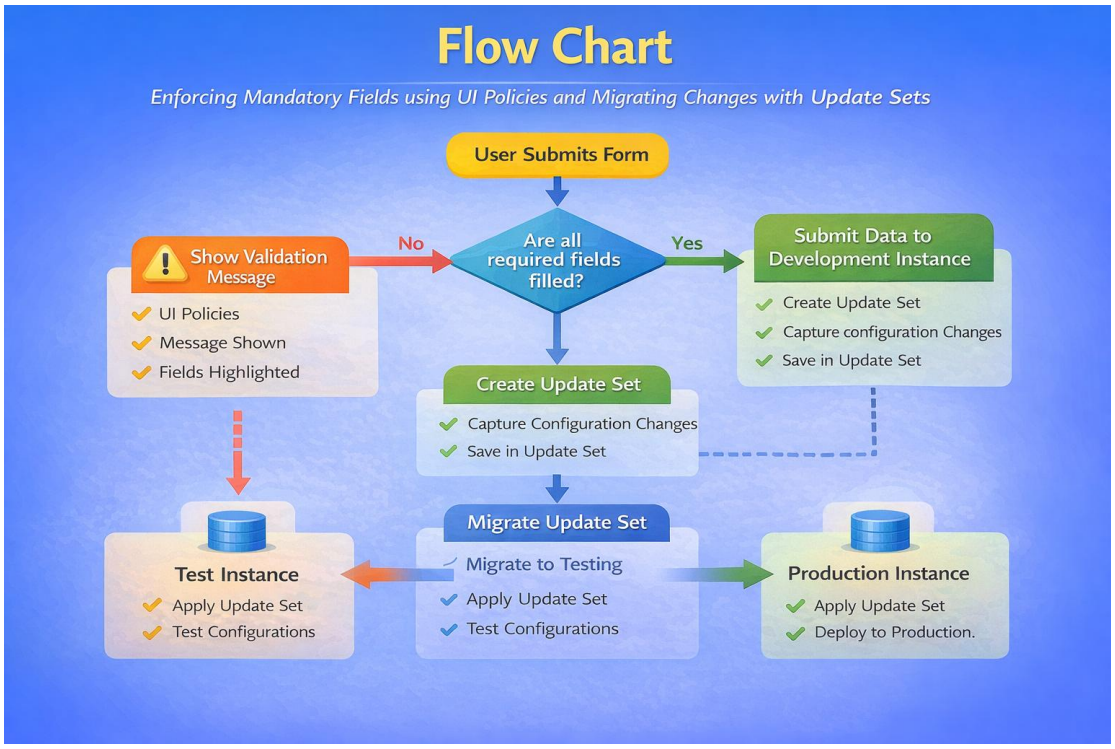
4. Update Set Creation
All configuration changes such as UI policies, form modifications, and scripts must be captured automatically in update sets within the development instance.

5. Update Set Migration
The system should allow update sets to be moved from the development instance to other environments such as testing or production.

Non-Functional Requirements

1. System Reliability
The system must reliably enforce mandatory fields to ensure complete and accurate data entry.

2. Performance
UI Policies should operate efficiently without affecting system performance or user experience.

3. Security
Only authorized administrators should be allowed to create UI policies and manage update sets.


4. Maintainability
The system configuration should be easy to maintain and update when new requirements .
